YOUR HOME. YOUR COMFORT

GARAGE DOORS

- ROLLER
- SECTIONAL

Roller garage doors

Roller garage door is a perfect solution especially in a case of small rooms and when the garage bay is too short. Their advantage is space saving because they work vertically and have no ceiling rails.

Garage doors, thanks to their design, ensure the best thermal and acoustic insulation in the room. Sealing of the door is provided by a set of seals fitted along the entire perimeter of the door. Each panel has an integrated seal, which makes each section of the door sealing each other after closing. Heat transfer coefficient for the panel of the sectional garage door is about $U=1,0 \text{ W/m}^2 \text{ K}$.

Sectional doors

Sectional garage doors are perfect and modern solution to protect Your garage. They do not occupy space in the garage while opening and closing. The gate is rated to 15 thousands open/close cycles.

Garage door panel is made of appropriately shaped zinc-coated sheet, covered with polyester polisher and filled with Freonfree polyurethane foam. Its total thickness is 40 mm.

EXTERIOR ROLLER BLINDS

Exterior Roller Blinds

Aluminium roller blinds are exterior apertures, made of aluminium profiles, mounted above a window hole or within its diameter. They are lifted and lowered e.g. by means of tape, string or electrical engine. In our offer we have a few system types of roller blinds, such as: outside, top, top duo, flush mounted SP system and RKS. You can easily find the product You need among them. Additionally roller blinds in all rooms in building can be integrated with gateways, garage doors, irrigation systems and garden lightning by the advanced technology of system automatic control.

Colouring

Armours used in our DK-Prof roller blinds are available in seven basic colours and eight untypical - including elegant wooden-like colours. The colours are very interesting elements for those clients who appreciate natural colouring. It allows for ideal matching of roller blinds colours to the window and all other elements of joinery. Thanks to that you can reach the harmony and aesthetical look of all building.

silver	brown	ashen	gray
yellow	red	green	white cream
ivory	white	blue	gray anthracite

TEXTILE ROLLER BLINDS

Textile Roller Blinds

Textile roller blind is a functional and aesthetic curtain made of polyester, easy to install and ensuring privacy of each room. This kind of curtain is an alternative solution proposed to the outside lighting regulation as well as an interesting element of inside decoration. The offer includes several hundreds of patterns and fabric colours, what allows for ideal compositions both in flat and used interiors and emphasis of each room individual character. New generation fabrics for the production of textile roller blinds are impregnated and antistatic (they do not draw dust) what helps in cleanliness upkeep.

MOSQUITO SCREENS

Mosquito screens

Mosquito screens are an excellent protection against insects. They do not reduce visibility within the window diameter. They are made of aluminium profiles and of grey net of inflammable glass fiber. Due to the design, the mosquito screens can be divided into: window frame mosquito screens, door frame mosquito screens, roller mosquito screens.
